# Retrieval practice

Retrieval practice means trying to recall information from memory.

A retrieval attempt happens before looking at the answer.

Checking the answer gives feedback after the attempt.

# Space your practice

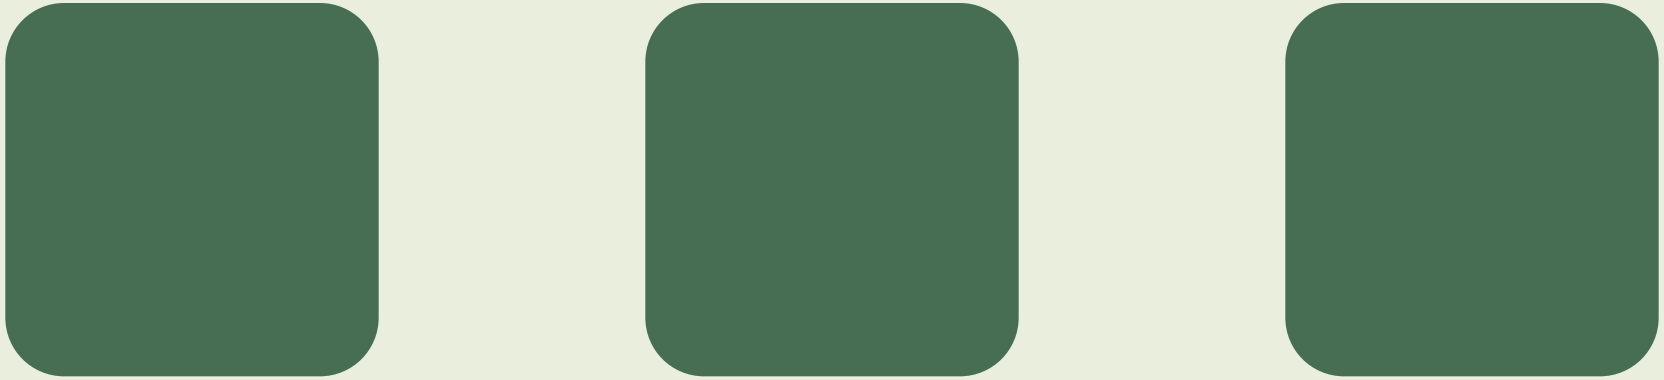
Spaced practice distributes study sessions over time.

Massed practice groups study into one continuous session.

A review schedule decides when a card should be studied again.

# Make a useful card

An atomic card tests one clear idea.

A source reference points back to the supporting lecture page.


An ambiguous question can have more than one plausible answer.
